DS2 HW3

Siyan Chen 4/6/2019

(a) Produce some graphical summaries of the Weeklydata.

(b) Use the full data set to perform a logistic regression with Direction as the response and the five Lagv ariables plus Volumeas predictors. Do any of the predictors appear to be statistically significant? If so, which ones?

##
         Balanced Accuracy: 0.5161
##
##
          'Positive' Class : Up
##
```

From the confusion matrix, sensiticity is 0.9207 (the probability of true "Up" is 0.9207 when the direction is predicted to be Up) and the sensitivity is 0.1116 (the probability of not "Up" is 0.1322 when the direction is predicted to be down) Accuracy tells the overall probability of correct classifier is 0.5611. Kappa is 0.035, which measures the interrater agreement for categorical items.

(d) Plot the ROC curve using the predicted probability from logistic regression and report the AUC.

```
roc_glm = roc(df$Direction, pred.prob)
plot(roc_glm, legacy.axes = TRUE, print.auc = TRUE)
plot(smooth(roc_glm), col = 4, add = TRUE)
```

Based on the plot, the AUC us 0.554, which suggests that the capability of logistic models distinguishing between classes is not good.

(e) Now fit the logistic regression model using a training data period from 1990 to 2008, with Lag1 and Lag2 as the predictors. Plot the ROC curve using the held out data(that is, the data from 2009 and 2010) and report the AUC.

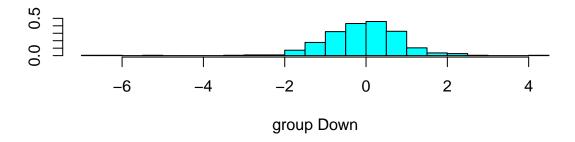

```
train_subset = df %>%
  filter(1990<=Year & Year<=2008)
test_subset = anti_join(df, train_subset)
## Joining, by = c("Year", "Lag1", "Lag2", "Lag3", "Lag4", "Lag5", "Volume", "Today", "Direction")
rowtrain = train_subset$Direction
rowtest = test_subset$Direction
glm_fit1 = glm(Direction~ Lag1 + Lag2,
               data = train_subset,
               family = binomial)
summary(glm_fit1)

roc.qda = roc(test_subset$Direction, qda.pred$posterior[,2],
              levels = c("Down","Up"))
plot(roc.qda, legacy.axix = TRUE, print.auc = TRUE)
plot(smooth(roc.qda), col = 4, add = TRUE)
```

LDA is 0.557 and AUC for QDA is 0.529

(g) Repeat (e) using KNN. Briefly discuss your results.

AUC for KNN is 0.566.
